
a
the median chain: RNF2 IDR, 69 residues
probability density
compact, P_c
5.4%
extended, P_e
5.7%
$R_g/\langle R_g \rangle$
b
asymmetric chains
18% of chains
broadly fluctuating coils
68% of chains
α-synuclein
TRIM33 IDR
FUS N-term
fluctuation-suppressed
stiff coils
10% of chains
prothymosin-α
CENP-B IDR
3% of chains
extended population P_e
compact population P_c
$\langle R_g \rangle/R_{Flory}$
c
compact population P_c
$\langle R_g \rangle/R_{Flory}$
d
extended population P_e
$\langle R_g \rangle/R_{Flory}$
one human chain (network)
validation proteins, MD (median)
validation proteins, network (median)
